PROFILE

Full Stack developer with **3 years of commercial experience**, focused on Node.js / NestJS backends and React / TypeScript frontends. For the last year I have been building software for **self-service payment terminals**: from the Linux services on the devices, to the backend that processes transactions, to the admin panels that operate them. Comfortable owning a feature end to end, including the hardware it runs on and the money it moves.

TECHNICAL SKILLS

Backend	Node.js (NodeJS), NestJS, Express, Fastify, TypeScript, JavaScript, Python, PHP, Laravel, web scraping, REST API, Swagger / OpenAPI, WebSocket, Socket.IO, JWT, Microservices, Cron jobs
Frontend	React (React.js), React Native, Next.js, Vue.js, Nuxt, TypeScript, Redux, Zustand, TanStack Query, React Hook Form, Zod, Tailwind CSS, Material-UI (MUI), HTML5, CSS3
Data	PostgreSQL (Postgres), MySQL, SQLite, MongoDB, Redis, Firebase, Supabase, TypeORM, Mongoose
Infrastructure	Docker, Linux, AWS, Google Cloud, Git / GitHub, GitHub Actions, CI/CD, Raspberry Pi
Testing & tools	Jest, Playwright, Cypress, Postman, Jira, Trello, Figma, Clean Architecture, SOLID
Integrations	Stripe, PayPal, Webhooks, Telegram Bot API, MQTT, Modbus
Hardware	Ingenico payment terminals (ECR3), ITL banknote recyclers (SSP), fiscal registers, printers, scanners, serial protocols
AI	Claude API, OpenAI API, production LLM integrations, LLM data extraction, function calling, prompt engineering
Languages	Ukrainian – native, Russian – native, English – B1 (technical communication), Spanish – A2

EXPERIENCE

Backend & IoT Developer • Payment4U, Czechia (remote)

Aug 2025 – Present

Software for self-service terminals and payment systems.

- Built and maintained **Raspberry Pi based terminals in production**: payment kiosks, POS systems and automated lockers for parcel and left-luggage handling.
- Developed a **parcel locker (postamát) system** for a Czech client: NestJS backend, React admin panel and the kiosk UI customers use at the device.
- Integrated payment and peripheral hardware over binary protocols: **Ingenico card terminals via ECR3, ITL banknote recyclers via SSP**, fiscal registers, printers and scanners.
- Handled money-critical flows: **idempotent transaction processing**, reconciliation between device and backend, recovery from failures mid-transaction and from provider timeouts.
- Developed backend services in Node.js / NestJS and Python for terminal fleet management and transaction processing, with PostgreSQL and MongoDB schemas for device state, operations and payment records.
- Built React / TypeScript admin panels (monitoring, operator alerts, order and locker management) and ran Linux devices in production: deployment, remote updates, remote diagnostics.
- Integrated Anthropic and OpenAI APIs into production features; use AI tooling daily with review of all code.

Full Stack Developer (Freelance) • Self-employed, remote

Mar 2024 – Aug 2025

Custom web and mobile development for private clients and small businesses, delivered end to end.

- Built an **AI-powered data parser** (Python, Node.js): crawls websites and works around anti-bot protections, sends the HTML to an LLM for structured extraction, stores results in the database and serves them via API to a product catalog.
- Built a **cross-platform yoga app** (React Native, Node.js / NestJS): video courses, comments, reviews, chat and payments.
- Delivered web applications across several domains: **CRM systems, online stores, food delivery platforms** and a social network with subscriptions and user-generated content.
- Developed REST APIs in Node.js / NestJS (JWT auth, role-based access, validation) and React / Next.js / Vue.js frontends; handled deployment, hosting and client communication end to end.

EDUCATION

Master's and Bachelor's degrees, International Management • Dnipro National University

2020 – 2025

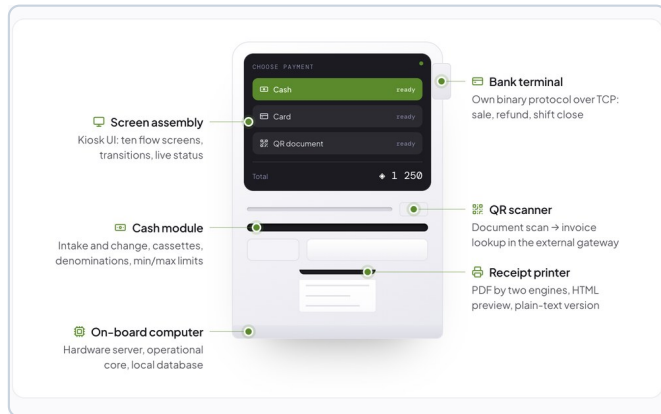

Full Stack Web Development • IT STEP Computer Academy

2022 – 2025

SELECTED PROJECTS

Four production systems, each built from an empty repository to real users and real money. Interactive demos with fictional data: zazplay.github.io/viktor-zhuk (click any image).

Self-service payment platform

kiosk · cash · cards · QR

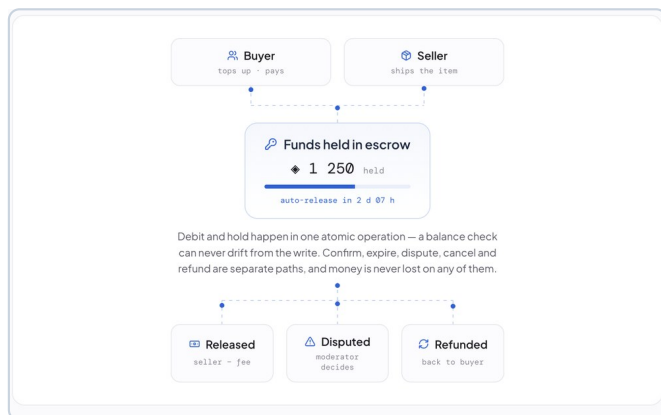

Kiosk UI with ten flow screens and live device status; cash module with change and denominations; bank terminal over its own binary TCP protocol (sale, refund, shift close); QR document scan and receipt printing.

Smart equipment locker

cabinet · SMS · dispatcher

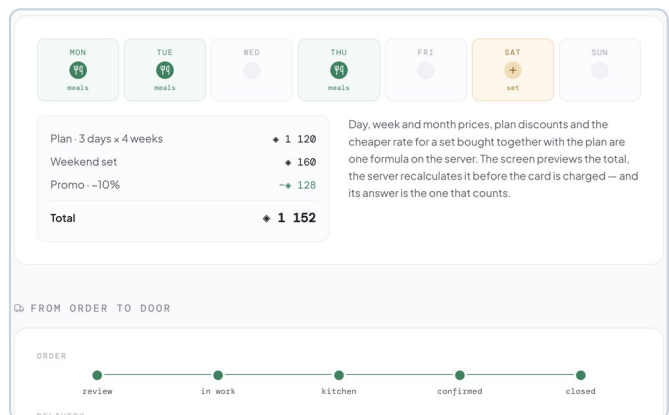

Dispatcher panel showing every cell of the wall on one screen, updated live over WebSocket; portrait kiosk on the cabinet with SMS code by phone number and a QR scanner.

Game-asset marketplace

escrow · wallet · disputes

Escrow where debit and hold happen in one atomic operation; release, dispute, cancel and refund are separate paths, and money is never lost on any of them.

Meal subscription service

plans · renewals · kitchen

Day, week and month plans, discounts and add-on sets calculated by one server-side formula; order and delivery tracking with a full audit history of who did what and when.
