PROFILE

Full Stack developer with 2.5 years of commercial experience, focused on Node.js / NestJS backends and React / TypeScript frontends. Spent the last year building software for self-service payment terminals, from the Linux services running on the devices up to the backend that processes their transactions and the admin panels that operate them. Comfortable owning a feature end to end, including the hardware it runs on and the money it moves.

TECHNICAL SKILLS

Backend Node.js, NestJS, Express, Fastify, TypeScript, JavaScript, Python, REST API, WebSocket, JWT

Frontend React, Next.js, TypeScript, Redux, Tailwind CSS, Material-UI, HTML5, CSS3

Data PostgreSQL, MongoDB, Redis, TypeORM, Mongoose

Infrastructure Docker, Linux, Git / GitHub, CI/CD, Raspberry Pi

Hardware Ingenico payment terminals (ECR3), ITL banknote recyclers (SSP), fiscal registers, receipt printers, barcode scanners, serial protocols

AI Anthropic Claude API, OpenAI API, production LLM integrations, Claude Code in daily development

Languages Ukrainian native, Russian native, English B1 (technical documentation and correspondence), Spanish A2

EXPERIENCE

Backend & IoT Developer · Payment4U, Czechia (remote)

Aug 2025 – Present

Software for self-service terminals and payment systems.

- Built and maintained Raspberry Pi based terminals in production: payment kiosks, POS systems and automated lockers for parcel and left-luggage handling.
- Integrated payment and peripheral hardware over binary protocols: Ingenico card terminals via ECR3, ITL banknote recyclers via SSP, fiscal registers, printers and scanners.
- Handled money-critical flows: idempotent transaction processing, reconciliation between device and backend, recovery from failures mid-transaction and from provider timeouts.
- Developed backend services in Node.js / NestJS and Python for terminal fleet management, device state and transaction processing.
- Built React / TypeScript admin panels: monitoring dashboards, operator alert flows, order and locker management.
- Designed and maintained PostgreSQL and MongoDB schemas for device state, operations and payment records.
- Ran Linux-based devices in production: deployment, remote updates and remote diagnostics of field issues.
- Integrated Anthropic and OpenAI APIs into production features, and use AI tooling daily with review of every generated line before it ships.

Full Stack Developer (Freelance) · Self-employed, remote

Mar 2024 – Aug 2025

Custom web development for private clients and small businesses, delivered end to end.

- Delivered web applications across several domains: CRM systems, online stores, food delivery platforms and a social network with subscriptions and user-generated content.
- Developed REST APIs in Node.js / NestJS with TypeScript, including JWT authentication, role-based authorization and data validation.
- Created responsive frontends in React and Next.js with TypeScript and Redux.
- Wrote scrapers for automated data extraction and processing.
- Handled deployment and hosting personally: server configuration, domains, releases to production.
- Worked directly with clients: requirements gathering, delivery and ongoing support after launch.

EDUCATION

Master's degree, International Management · Dnipro National University

Sep 2024 – Dec 2025

Bachelor's degree, International Management · Dnipro National University

Sep 2020 – Jun 2024

Full Stack Web Development · IT STEP Computer Academy

2022 – 2025

Node.js, React, TypeScript, NestJS, PostgreSQL, MongoDB, Docker, Git
